# ABDULLAH NOOR

Product designer focused on accessibility and interaction design. I do the user research, and ship real products.
abdullah.noor@nyu.edu | noorabdullah.me | LinkedIn | +1-646-210-0935

## EDUCATION

**New York University** **Abu Dhabi, UAE & New York, NY**
*B.A. Interactive Media, Minor in Computer Science* *Aug 2023 – May 2027*

- **Graduating May 2027. Available to start June 2027.** Open to relocating to San Jose.
- Coursework: Human-Centered Prototyping, Interaction Design, Data Structures & Algorithms

## EXPERIENCE

**Women Choice Insider** **Dubai, UAE (Hybrid)**
*Product Development Intern* *Jun 2026 – Sept 2026*

- Led UX for a platform serving a 30,000+ member network of women executives and SME founders, reporting directly to the CEO. Ran two end-to-end UX audits covering onboarding, user journeys, and retention, and turned the findings into a bug list, feature roadmap, and UX recommendations.
- Worked with the development team to translate recommendations into builds; many of them now ship on the live platform.
- Designed the brand's visual identity and design handbook on my own in Figma, and prototyped feature concepts with AI-assisted tools (Lovable).

**The Ability Project, NYU Tandon School of Engineering** **New York, NY**
*Research Assistant, Accessible Design* *May 2026 – Present*

- Designed the **Descent Lock**, a 3D-printed clamp that fits on the leg of a height-adjustable table and physically stops it from lowering onto a wheelchair user. Took it from observation and literature review through sensor-and-buzzer sketches to a working prototype; now refining it for testing with wheelchair users.
- Building a **Chrome extension** that scans web pages for accessibility issues and gives developers a plain-language checklist for the WCAG 2.2 checks scanners can't automate. In final stress testing before Chrome Web Store release.
- Wrote the WCAG 2.2 checklist for web developers that the extension is built on, and designed a screen-reader-compatible guide to NYU's height-adjustable tables.

**SkyIT (GBCS Group)** **Alberta, Canada (Remote)**
*UI/UX Design Intern* *Mar 2026 – Apr 2026*

- Owned the design process for web products, from user research and interaction design to production-ready component systems.
- Defined user flows and interaction patterns with engineers, shaping UX decisions around technical constraints.

## PROJECTS

**Tilt Trail** | *Accessible play, p5.js, ml5.js, built with Claude Code* **Oct 2026**
Endless runner steered by head tilt, for kids who can't use swipe controls. Per-player calibration, adjustable sensitivity, and a keyboard/switch fallback; video never leaves the browser. Game design and mechanics are mine; I adapted facemesh from ml5 library. UI, handout, documentation, and posters came from an AI-readable design system.

**Surrender** | *Behavioral UX, MongoDB, Express, React, Node.js* **2025**
Messaging platform that strips read receipts and delays delivery 1–7 days at random, to test how people communicate when the system stops performing immediacy..

**Handshake: Course Intelligence** | *UX Research, Interaction Design, Figma* **2026**
Feature concept letting students tag courses with instructor-validated skills that recruiters can filter. Conducted user research, defined interaction patterns, and produced design deliverables in a team of three.

## SKILLS

**Design:** Interaction design · UX research · UX audits · Prototyping · Figma · Framer · Design systems and handbooks · Material Design (self-study) · HTML/CSS

**AI-assisted building:** Claude Code · Lovable · MCP servers · AI APIs · AI-readable design systems · High-fidelity prototypes from design concepts

**Accessibility:** WCAG 2.2 & ADA compliance · Accessibility auditing · Screen-reader-compatible documentation · Tactile & alternative formats · Inclusive physical design

**Physical Computing:** Arduino · Sensor integration · Circuit design · Actuators · 3D printing · Haptics

**Programming:** JavaScript (React, Node.js, p5.js, matter.js, ml5.js) · C/C++ · Python (NumPy, SciPy) · SQL
